***Use this packing guide to calculate how much packaging you'll need for your move!***

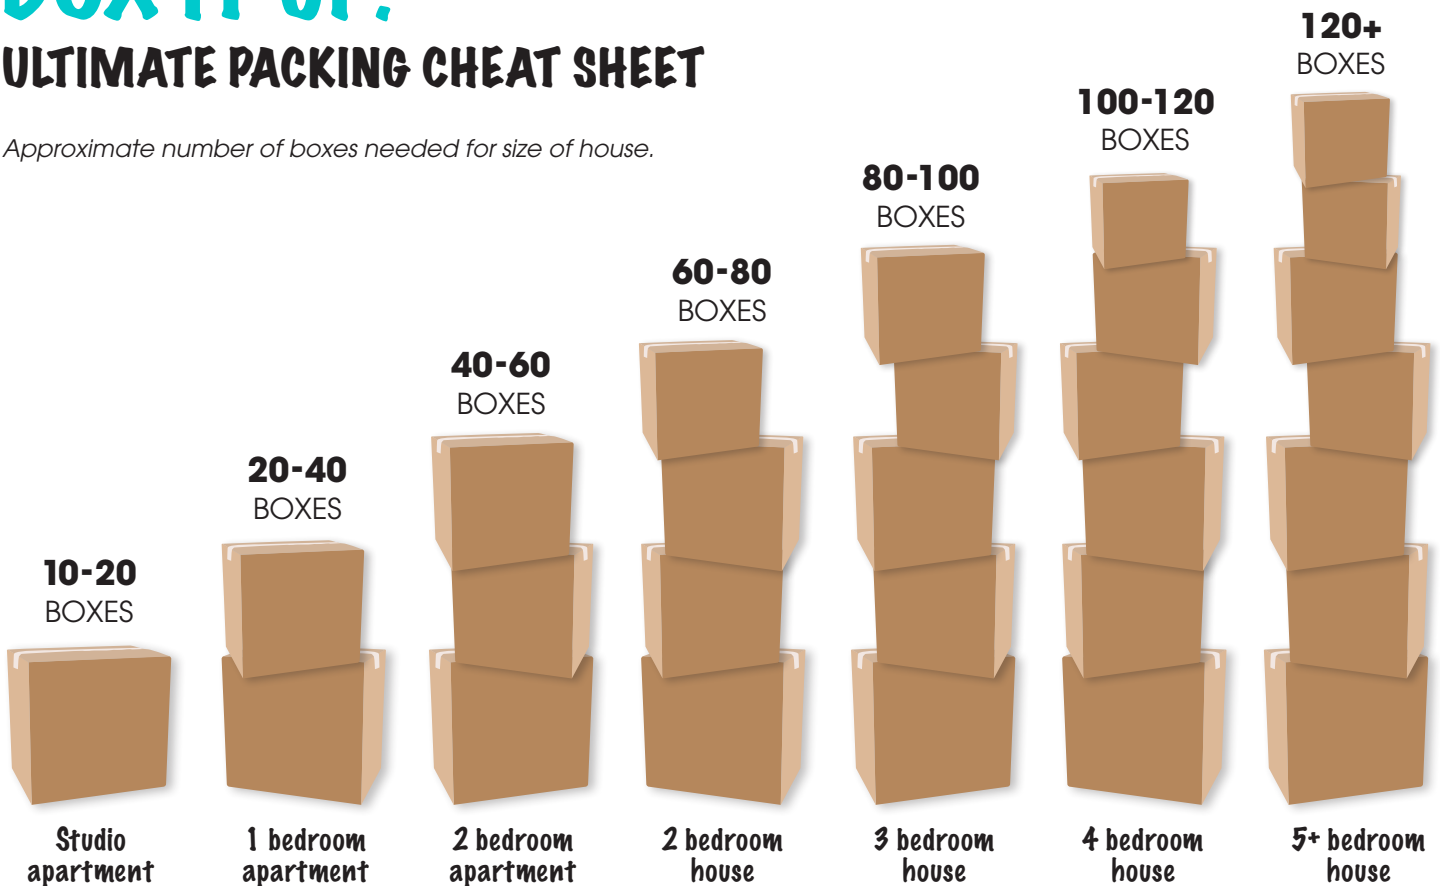

## WHAT'S INCLUDED:

- **Packing Calculator**  
*A numbers guide to everything you'll need to pack up your home safely and efficiently.*

# BOX IT UP:

## ULTIMATE PACKING CHEAT SHEET

*Approximate number of boxes needed for size of house.*

- Don't forget to label boxes with a list of the items inside, as well as the room they belong in.
- Consider packing electronics, like televisions and computers, in their original boxes, if you can find them.
- Always wrap fragile items, like mirrors and ceramic decorations, in bubble wrap before placing in boxes. Cover furniture in blankets for some extra cushion.
- Keep hanging clothes as is, and pack them in a wardrobe box to save time. Each box holds about 2 feet of hanging clothes.
- Aside from cardboard boxes, stackable plastic bins work wonders for keeping things organized and protected, and they are relatively inexpensive.
- Allot one roll of tape for every 15-20 boxes, and be sure to tape every box on the top and bottom.
- When packing essential items you will need right away, keep them toward the top of the box, or better yet, together in their own box.
